

FFHQ 64×64: samples from analytic denoisers vs U-nets (Heun 30 steps, 256 shared seeds; k, τ = MSE-optimal held-out schedule)

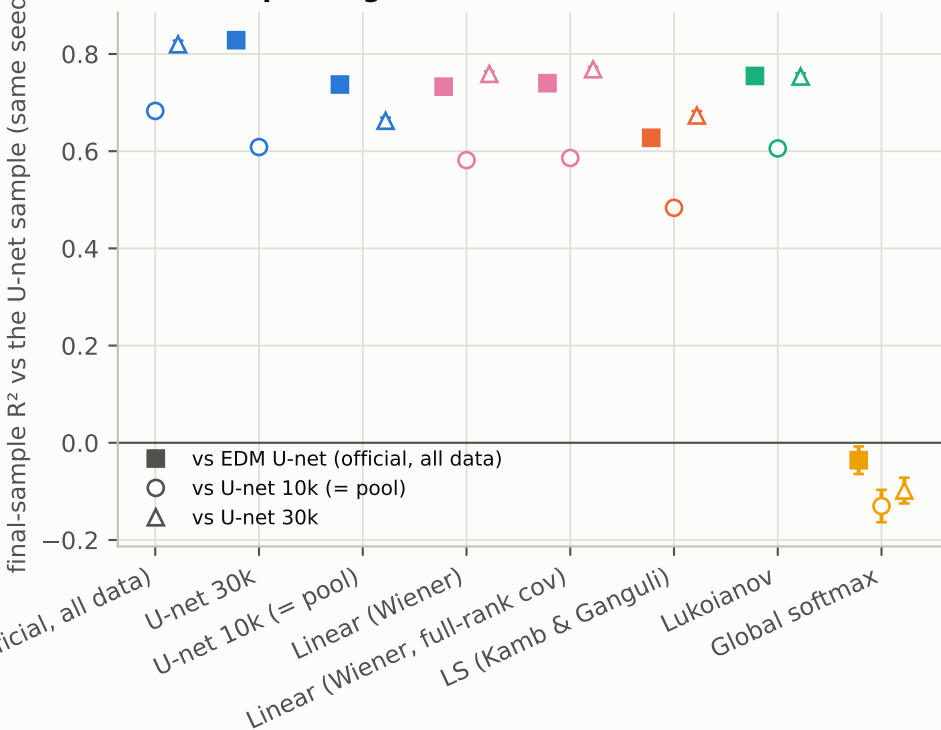

On EDM U-net (official, all data)'s trajectory

On U-net 10k (= pool)'s trajectory

Final samples: agreement with each U-net

Copying: distance to the 10k pool (copy = $d_1/d_2 < 1/3$)
